WORK EXPERIENCE

"Machine Learning Engineer"
Intetics Company

06/2015 - 07/2017   Address: Naples, Florida, United States

Achievements/Tasks
- I had worked to build predict model for stock predict with 50 years history of stock
- Working on social media real data for many platform
- Applying NLP techniques to get the wanted results from the text
- Organizing the work alongside the team using version control

"Python Specially Automation Engineer"
BairesDev

10/2016 - 06/2017   Address: San Francisco, California

Achievements/Tasks
- I had worked to build 13 scraping and crawling projects.
- Also I worked with appinum and 4 desktop automation projects.
- By other words, I was worked for automation developer while work with this company.

"AI Engineer & Mobile Developer"
AWARE

05/2018 - 03/2020   Address: Bedford, Massachusetts, United States

Achievements/Tasks
- First I took part in liveness detection & spoof detection project.
- Second I took part in summarize and mind-map project.
- Third I took part in Reinforcement project to build game bot.
- Last, I built auto register member of company by using face-recognize and voice.
- Totally, I am got enough experience about artificial intelligence from this.
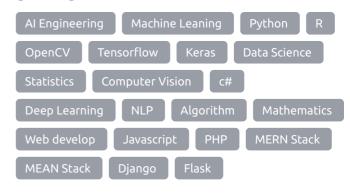

EDUCATION

Tsinghua University
China

04/2011 - 09/2015   Beijing, China

Courses
- Bachelor of Computer Science (BCompSc)

SKILLS

AI Engineering | Machine Leaning | Python | R
OpenCV | Tensorflow | Keras | Data Science
Statistics | Computer Vision | c#
Deep Learning | NLP | Algorithm | Mathematics
Web develop | Javascript | PHP | MERN Stack
MEAN Stack | Django | Flask

PERSONAL PROJECTS

OpenPredict (FT and NFT market) (08/2020 - 01/2021)
- NFT platform with OpenPredict smart token. OpenPredict protocol aims to solve the problem by introducing synthetic assets, also known as synths, in the form of a Liquid Options contract. A Liquid Options contract gives traders the ability to enter and exit a contract position before expiration without being restricted to the exchange in which it was created. These options are minted into fungible tokens as synthetic assets (synths), enabling first-ever options that are not siloed to a single exchange

Whatsapp & Telegram & Reddit & Facebook (Automation) (04/2021 - 03/2022)
- They are all desktop app application and it used for only one company. In whatsapp and telegram, there are some functions like create groupand channel and bulk send message. And in reddit and facebook, there are some functions like group join and leave and send message and auto vote or downvote about post. I used python selenium and implement good gui via tkinter.

Liveness Detection & RL (04/2022 - 06/2022)
- This project is detect real face and not.Via RL.
- I built virtual glasses shop by using django and RL. https://en.smartbuyglasses.ch

LANGUAGES

English
Full Professional Proficiency

Chinese
Native or Bilingual Proficiency

NOTE

I have built many project without above projects.In here I showed my success product.
